GARDEN DESIGN & MAINTENANCE

Patios

After your patio has been laid, avoid heavy foot traffic or placing furniture on it for at least 72 hours to allow the mortar or bedding to set properly.

Keep the surface clean and free of debris—rake away leaves and dirt regularly to prevent staining or moss growth.

For the first few weeks, avoid placing heavy objects or using wet cloths that could leave marks.

If you're using a sealer, wait at least 28 days after installation before applying. Avoid using harsh chemicals or pressure washers—use a mild detergent and soft brush for cleaning.

To prevent staining, wipe up spills immediately, especially from oils, wine, or acidic substances.

Over time, natural weathering may occur—this is normal and can be minimised with regular sealing and maintenance.

With proper care, your patio will remain beautiful and durable for years to come.
